Intended Use
Medical device intended for use in healthcare settings by professional users, for the prevention of infections in patients, as a mechanical barrier to bacterial migration. The device is used on the patient, to delimit the surgical field, for covering limbs during surgical procedures, generally gynecological or orthopedic. It cannot be used on broken skin.

Characteristics
Short-term non-invasive sterile device - not reusable.

Warnings for the User
Use the device before the expiration date indicated on the individual package, exclusively for its intended use. Do not use if the individual package is not intact. Operate aseptically. Do not resterilize, as further sterilization may damage the device. Do not reuse, as optimal cleaning and asepsis conditions cannot be guaranteed after the first use. If a serious incident occurs with the use of the device, the user must promptly report it to the manufacturer and the competent authority of the relevant Member State.

Instructions for Use
Open the package and remove the device checking its integrity; apply the device to the patient preferably on dry surfaces; discard after use.

Side Effects
There is no evidence of toxicity in the materials that make up the product.

Contraindications
Do not keep the device in contact with direct heat sources as it may burn. The device is not antistatic; do not use in the presence of flammable substances. The device should not be used for direct contact with broken skin; for the filtration of blood or other body fluids.

Disposal
Do not disperse the product in the environment. Dispose of the used device as special waste.
