

be paid even to the models which are supplied with a sure-flow tubing for which the risk of disjunction exists even though in a reduced way.

This product contains phthalates (DEHP). Even if risks to human health are not confirmed, the use of the devices on pregnant / nursing or child should be evaluated by your doctor.

The use of nasal cannulas may be associated with epistaxis in subjects prone to bleeding and/or on anticoagulant therapy.

The concentrated oxygen can ignite combustible materials. To avoid risk of fire or explosion keep away from possible sources of ignition, and refer to the precautions for use of the equipment used for the delivery of oxygen.

STORAGE
The product must be stored in its original package at the environmental conditions (temperature and relative humidity) specified on the pouch's label. Putting external heavy weights on the package could damage the product.

GENERAL NOTES
If a serious incident occurs while using this device or as a result of its use, please report it to the Manufacturer and to your national authority. For any malfunction or defect of the device, inform the Manufacturer's Quality Service.

WASTE DISPOSAL
Waste coming from health facilities must be disposed of according to the regulation in force.

EN NASAL CANNULA FOR OXYGENTHERAPY INSTRUCTIONS FOR USE

INDICATIONS
Therapeutic administration of oxygen through the nose.
Disposable product (for a single patient), to be used continuously for a period not exceeding 30 days.
The oxygen source must be in according to the regulations in force.
The products must be used by qualified healthcare personnel.

INSTRUCTIONS
Introduce the nasal distributor carefully in each one of the nostrils and proceed as described underneath for each model of nasal cannula.
Keep the nasal distributor in position and pass both the right and left tubing over the ear-bows down over the jaws to under the chin. Adjust the tubing by means of the plastic ring.
Plug the end of the connection tubing onto the oxygen source. When the device is properly dressed, deliver oxygen and regulate the flow as necessary.

CONTRA-INDICATIONS
No contra-indications are described.

WARNINGS
If device is reused, contrarily to the present instructions, this may compromise following:
1. alteration of materials
2. Not cleanliness of the device and possible presence of biological residues that might cause cross-infections
3. Loss of initial functional features of product.

Before connecting to oxygen source verify its functioning. The accidental crushing of the connection tubing do not allow oxygen to flow properly and may cause the disjunction of the connector. It is therefore recommended that the users control carefully. The same attention must
